Senior Software Engineer | Developer

Summary

Full-stack engineer with 7+ years building high-performance web and mobile applications using React, Next.js, Node.js, Django REST, .NET Core, and modern cloud platforms (AWS, Azure). I design scalable architectures, build secure APIs, optimize data-heavy applications, and deliver end-to-end features across UI, backend, DevOps, and cloud infrastructure. Strong in CMS development (WordPress, Umbraco), AI integrations, automation, microservices, CI/CD pipelines, caching, and performance optimization. Experienced in tailoring CMS platforms into headless architectures and integrating them with SaaS and eCommerce systems. I work efficiently in remote, cross-functional, and fast-paced environments.

Education

University of Southern Mindanao 07/2013 - 06/2018
Degree: Bachelor of Science in Computer Science
Relevant coursework: Web Development, Data Structures and Algorithms, Operating Systems, Computer Architecture, Database Systems, Software Engineering, Computer Networks.

Qualifications

- 7+ years of full-stack development experience delivering production-ready web and mobile applications across SaaS, EdTech, Retail, CMS, and AI-driven platforms.
- Advanced proficiency in **React.js, Next.js, Node.js, Django REST, .NET Core**, with strong UI/UX awareness and scalable backend architecture skills.
- Deep experience designing **RESTful and GraphQL APIs, microservices, caching layers, and distributed systems** optimized for performance and security.
- Strong command of relational and NoSQL databases including **PostgreSQL, SQL Server, MongoDB, DynamoDB**, with proven success in query optimization and schema design.
- Skilled in deploying and maintaining cloud infrastructure in **AWS (Lambda, ECS/EKS, S3, CloudFront, RDS)** and **Azure (App Service, Functions, AKS)**.
- Hands-on expertise in **CI/CD, containerization, and DevOps tooling**: Docker, Kubernetes, Terraform, GitHub Actions, Jenkins.
- Experience integrating **AI and automation** into production systems using **OpenAI API, LangChain, TensorFlow**, and workflow automation tools.
- **CMS expertise:** Migrated and customized **WordPress** into headless CMS architectures integrated with Next.js, optimized for SEO and performance; implemented **Umbraco CMS modules** for enterprise clients with multi-language and workflow support.
- Strong understanding of **authentication, authorization, RBAC, OAuth2, JWT, HTTPS, OWASP**, and secure software development practices.

- Demonstrated ability to complete the full **SDLC**: requirements, architecture, coding, testing, deployment, documentation, and long-term support.
- Excellent communicator experienced in **remote collaboration, Agile/Scrum development, cross-functional teamwork, and mentoring junior engineers**.

Senior Full-Stack Developer

Novatrade, Japan – Remote 06/2023 – 09/2025

Domain / Industry: SaaS, AI Automation, Cloud Infrastructure, E-Commerce, Data Analytics

Environment: React.js, Next.js, WordPress, TypeScript, Node.js, Django REST, AWS (Lambda, CloudFront, S3, RDS), PostgreSQL, Docker, Terraform, GitHub Actions

Responsibilities:

- Architected large-scale SaaS platforms using React, Next.js, TypeScript, Node.js, and Django REST.
- Migrated and customized WordPress into headless CMS architecture integrated with Next.js, improving SEO and performance.
- Implemented Umbraco CMS modules for enterprise clients, enabling flexible content workflows and multi-language support.
- Designed secure REST + GraphQL APIs with caching, throttling, and error-handling layers.
- Built AI automation workflows using OpenAI and LangChain for content generation and processing.
- Developed distributed microservices with Node.js/Python, queues, workers, and AWS Lambda.
- Implemented multi-tenant authentication with OAuth2, JWT, RBAC, MFA, and scoped access controls.
- Designed AWS infrastructure using CloudFront, S3, RDS, Secrets Manager, API Gateway, and VPC isolation.
- Built automated CI/CD pipelines with GitHub Actions, Docker, and Terraform for zero-downtime deployments.
- Improved frontend performance by 35% through bundling optimization, lazy loading, and CDN caching.
- Created reusable UI component libraries and microfrontend modules for improved developer velocity.
- Implemented Redis caching, connection pooling, query batching, and performance optimization strategies.
- Designed SQL schema migrations, database indexing, backup plans, and high-availability patterns.
- Deployed observability: distributed tracing, structured logs, metrics dashboards, and automated alerts.
- Delivered PCI-compliant secure payment flows and encrypted secret storage.
- Implemented resiliency patterns such as retry logic, circuit breakers, and auto-healing deployments.
- Coordinated with cross-functional teams (Design, QA, DevOps, Backend) for end-to-end feature delivery.
- Created system architecture docs, diagrams, API references, and technical specifications.
- Led code reviews, enforced coding standards, and mentored junior/mid developers.
- Planned sprints, estimated tasks, and delivered features aligned with product roadmaps.
- Refactored legacy modules into modern microservices to improve maintainability.
- Developed full automated test suites including unit, integration, contract, and load tests.

Full-Stack Developer

LearnWithSocrates, USA - Remote 10/2021 – 04/2023

Domain / Industry: EdTech, AI-Driven Learning, Subscription Billing

Environment: React, Next.js (SSR/SSG), Django REST, ASP.NET, PostgreSQL, Node.js, Stripe/PayPal, AWS

Responsibilities:

- Built core platform features using React, Next.js SSR/SSG, Django REST, and .NET integrations.
- Developed multi-tenant learning modules, curriculum engines, and student progress workflows.
- Integrated Stripe, PayPal, and SendGrid for billing, renewals, invoices, and communications.
- Designed relational PostgreSQL schemas, optimized queries, and implemented Redis caching.
- Built real-time analytics and progress dashboards using WebSockets and Chart.js.
- Developed background workers for notifications, content processing, and report generation.

- Created reusable UI frameworks, form management systems, and shared component libraries.
- Implemented secure API gateways, token refresh flows, and access policies for multiple user roles.
- Built automated CI/CD pipelines using GitHub Actions and AWS server infrastructure.
- Achieved 90%+ test coverage with Jest, Pytest, Cypress, and API integration suites.
- Designed monitoring dashboards with logs, metrics, and error tracking for production stability.
- Migrated monolithic components to microservices for improved scalability and code separation.
- Refactored large frontend modules to improve performance, accessibility, and reusability.
- Built admin tools for school administrators, teachers, parents, and support teams.
- Implemented SEO-optimized SSR strategies to improve search visibility and initial load speed.
- Built account-switching and impersonation features for support and admin teams.
- Worked closely with QA, product, curriculum, and design teams to ship high-quality releases.
- Created documentation, sprint estimations, architecture diagrams, and release notes.
- Planned sprints, participated in grooming, and supported cross-functional technical alignment.
- Improved API performance by tuning serializers, pagination, joins, and nested data fetch mechanisms.

Software Engineer (Full-Stack & Cloud)

Veggie LLC, Japan - Remote 06/2019 – 08/2021

Domain / Industry: Retail, Mobile Platforms, AI Recommendations

Environment: React.js, React Native, Node.js, FastAPI, Python, AWS (ECS, EKS, DynamoDB), MongoDB

Responsibilities:

- Developed e-commerce web and mobile apps using React.js, React Native, Node.js, and FastAPI.
- Built product recommendation engines using TensorFlow models for personalization and ranking.
- Designed backend microservices supporting checkout, inventory, product discovery, and suppliers.
- Deployed large-scale workloads to AWS ECS/EKS with load balancers, autoscaling, and rolling updates.
- Designed DynamoDB + MongoDB schemas with optimized indexing and partition strategies.
- Implemented real-time order tracking, notifications, and customer messaging using WebSockets.
- Built dashboards for forecasting, product management, logistics, and real-time analytics.
- Integrated Stripe/PayPal payments with secure tokenization and fallback retry logic.
- Implemented SSR patterns, caching, prefetching, and lazy loading for top-tier performance.
- Automated infrastructure using Terraform, Docker, and multi-environment provisioning setups.
- Created event-driven pipelines using SQS/SNS for asynchronous order processing and reporting.
- Tuned MongoDB/DynamoDB performance with batch writes, read replicas, and caching layers.
- Reduced AWS cost by ~25% via right-sizing, lifecycle policies, and compute/storage optimizations.
- Implemented cron jobs, serverless tasks, and automation for order reconciliation and data sync.
- Designed stock-flow logic, SKU normalization, searching, filtering, and category systems.
- Integrated push notifications and mobile analytics using Firebase and backend triggers.
- Built CI/CD pipelines for automated deployments and infrastructure versioning.
- Designed cart-to-delivery order workflows with multi-status automation and vendor routing.
- Created UX improvements for checkout, product views, loyalty systems, and user retention flows.
- Documented system architecture, API endpoints, workflows, diagrams, and technical onboarding guides.

Technical Skills

CMS Platforms: WordPress (headless, plugin development, SEO optimization), Umbraco (custom modules, content workflows)

Frontend: React.js, Next.js, Redux, Angular, Vue.js, React Native, Tailwind, Bootstrap, SSR/SSG

Backend: Node.js, Express.js, Django REST, FastAPI, .NET Core, GraphQL, Microservices

Cloud: AWS (Lambda, ECS/EKS, CloudFront, S3, RDS), Azure (App Services, Functions, AKS)

DevOps: Docker, Kubernetes, Terraform, GitHub Actions, Jenkins, CI/CD Pipelines

Databases: PostgreSQL, SQL Server, MySQL, MongoDB, Redis, DynamoDB

AI Integration: OpenAI API, LangChain, TensorFlow, NLP/Chatbot automation

Tools: Git, Jira, Confluence, Postman, Swagger, Grafana, Prometheus
Testing: Jest, Pytest, xUnit, NUnit, Cypress, Selenium
Security: OAuth2, JWT, RBAC, HTTPS, OWASP Best Practices
